1. Charging pad
2. Holding arm
3. Holding arm control button
4. Sliding arm control button
5. Sliding arm
6. LED indicator

How to use the Itian C1 car holder

1. Installation with the suction mount

Before attaching the car holder to the windshield, dashboard or some other smooth surface, you have to connect it to the bracket. Place the suction mount part over the holes on the back of the bracket and pull up until it snaps into place.

After attaching the suction cup to the bracket, you can place the car holder in the position. Make sure that the surface you're going to use is clean. Place the suction mount and turn the knob to secure it in place. To remove the car holder, turn the knob back and pull up the suction mount.
2. Installation with air vent mount

Before attaching the car holder to the air vent, you have to connect it to the bracket. Place the air vent mount over the holes on the back of the bracket and pull up until it snaps into place.

After attaching the air vent to the bracket, you can place the car holder in the position. Pull the upper part with the hook through the grill of the air vent and pin it on the inside of the grill. Adjust the legs on the lower part of the air vent mount to set the angle of the car holder.

Both suction cup mount and air vent mount can be rotated for 360 degrees to put your smartphone in vertical or horizontal position. You can also adjust the viewing angle thanks to the ball joints on both mounts.

How to use the wireless charging feature

Before you try using the wireless charging of this car holder, please make sure your smartphone supports this feature. If it doesn't have a built-in wireless charging feature, then you have to purchase a wireless charging receiver separately.

First of all, you have to connect the car charger with the charging pad using the microUSB cable from the package. After that, plug the car charger into the cigarette lighter slot, and the LED indicator should start blinking. To start charging your device wirelessly, simply place it in the car holder. The constant blue LED light indicates that your device is charging.
